

Gourd Mounting Arms, versatility explored

I Love Gourd Mounting Arms! These handy gourd mounting pins are designed to work with the gourd racks that use angle arms or rings.

There are 4 styles to choose from:

#1 Vertical 90: Ideal for Excluder & SuperGourds. The gourds entrance hole faces out and away from the pole.

#2 Vertical Straight: Ideal for Excluder & SuperGourds. The gourds entrance hole is directly below the gourd hanging arm

#3 Horizontal 90: Ideal for all Troyer Gourds. The gourds entrance hole is directly below the gourd-hanging arm

#4 Horizontal Straight: Ideal for All Troyer Gourds. The gourds entrance hole faces out and away from the pole.

Now with a little imagination you can get really creative when using manufactured gourds with GMA's. Look at the photo above.

On the angle arm **A** we have a SuperGourd with Tunnel Conversion using the # 4 GMA. To the right of that we have a SG with Tunnel Conversion using a # 3 GMA. To it's right a Troyer Vertical Gourd using a a #1 GMA.

On the angle arm **B** we have a SuperGourd using a #2 GMA. To it's right an Excluder Gourd using a #1 GMA. Notice how the gourd is positioned. On it's right a Troyer Horizontal Gourd using a #1 GMA.

On the angle arm **C** we have a Troyer Horizontal Gourd using a #4 GMA. This GMA's pin is facing outward which will hang the gourd further away from the gourd to its right. Next we have a Troyer Horizontal using a #3 GMA, and next to that gourd is an Excluder Gourd using a #2 GMA.

On the angle arm **D** we have a SuperGourd with Tunnel Conversion using a # 3 GMA. To its right an Excluder Gourd using a #2 GMA and to it's right a S&K Combo Gourd using a #4 GMA.

With a little ingenuity you can create a very unique gourd-hanging configuration. You are limited only by your imagination.

Did you know that all 4 GMA style can be used on the angle arms that are on our Super System and AAA. For the Gemini and Round Rack # 3 and # 2 work best.

You can use #1 for Troyer Gourds if you want you gourd to hang lower as seen in the photo above.

Change the direction of your gourd entrance holes. This is really handy when you have male domination issues. Have one gourd hang lower then the one next to it. Staggering the entrances also discourages male domination.

GMA's can accommodate natural gourds whose necks are no larger than 3". Each GMA is made from solid $\frac{3}{8}$ " aluminum includes a stainless bolt, nut and hitch pin.

There is a fifth GMA the 45°. Ideal for Super Systems. Best when used in the center position on the angle arms. Places your gourd entrance at a 45° angle.
