## Parts

- A) 4, 22" long Perch Rod
- B) 4, 1/4"-20 x 3/4" stainless screws
- C) 4, 1/4" -20 whiz nut

# Perch Rod Set of 4

Perch Rods will work best when placed at the ends of the angle arm. Use the inner hole of the pair of holes found at the end of the arm. For gourd racks with round rings like the Gemini gourd rack, the Perch Rod can be placed anywhere between your mounted gourds.

**Step 1)** You will need 1 rod (A), 1 bolt (B) and 1 nut (C). Place the bolt thru the hole in the perch rod and into the hole on the gourd rack. Thread on the nut. Tighten from the bolt head. We recommend that you continue placing the rods so that they continue in a counter-clockwise fashion. See Photo. Repeat for the last 3 rods.
