Never Needs To Be Reset

#FDST - Funnel Door Sparrow Trap

Set-up and Baiting Instructions

- Trap works inside or outside of buildings.
- Choose your spot for setting the trap where you see infestation of sparrows.
- Good spots are: next to shrubs, under your bird feeder, on the back side of the barn, or inside any buildings that sparrows like to feed, or just hang-out.
- Feed the sparrows on the platform for a few days before you start trapping.
- If trap is on the outside always set it inside for overnights and/or when it rains.
- Trap works the very best with a few sparrows left in as decoys.
- Empty trap DAILY. All except for your decoys.

▲ Set the trap on the plywood as shown. Give the main entrance a porch. Notice you only sprinkle some feed on the porch of the main entrance.

▲ Select yourself two wood or cement blocks and a plywood board fit to the size of trap floor.

▲ Set the plywood on top of the blocks and bait with Troyer's Sparrow Candy (millet and cracked corn). Place the feed in the five spots as shown in the photo above.

Wonderful!

When good birds get trapped they can be released unharmed!!!

▲ Troyer's Sparrow Candy (sold separately) is a mix of white millet and cracked corn, which is the ideal bait to help lure the sparrows into the trap. Please visit your local retailer for more information.
